The Honorable Todd Tiahrt  
Ranking Member, Subcommittee on Labor, Health and  
Human Services, Education, and Related Agencies  
Committee on Appropriations  
United States House of Representatives  
Washington, DC 20515

Dear Chairman Obey and Ranking Member Tiahrt:

The undersigned organizations write today to ask for a significant increase in funding for lung cancer research, treatment, prevention and patient services for fiscal year 2011.

Lung cancer is the leading cancer killer in the U.S, killing almost 160,000 people every year. Lung cancer has one of the highest incidence rates and one of the lowest survival rates. Smoking is the biggest cause of this disease, but exposure to second-hand smoke, air pollution, radon, asbestos, and other occupational hazards also cause this dread disease.

Each year, more than 219,000 new cases are diagnosed but tragically, only 16 percent of lung cancers are diagnosed at an early stage – making most diagnoses a death sentence. Advances in cancer prevention and treatment research have increased breast and colorectal cancer survival rates to 89 and 65 percent respectively, whereas lung cancer survival rates remain at a low 15 percent. More must be done to increase lung cancer survivorship.

Increased national attention to lung cancer is long overdue. There has been success in reducing other forms of cancer by a robust investment in research. We ask for your leadership in ensuring that lung

cancer is made a priority in the FY 2011 appropriations. Research for this deadly disease must be expanded so that surviving lung cancer becomes the norm instead of the exception.

Thank you for your continued leadership on this and many other health issues.

Sincerely,

American Lung Association  
Addi's Cure  
American Cancer Society Cancer Action Network  
American Thoracic Society
