

WHEN YOU LIMIT DRUG CHOICES, YOU LIMIT HOPE.

Living with a serious illness is especially hard for people in need—and not having access to the right medicine can be absolutely devastating. Yet that’s exactly what could happen with regulatory changes to Medicaid as proposed by Massachusetts. Doctors would be limited to prescribing just one drug per class, instead of having options. So even if that medication isn’t the best one for a patient’s unique needs, it may be the only choice. And if there’s an adverse reaction to a specific drug, patients could have to endure a lengthy bureaucratic process to get an alternative.

**Maintain patient access to the medicines they need.
Reject Medicaid waivers that would harm patients.**
