The Power of Community
AMERICAN LUNG ASSOCIATION

Guide to Asthma Policy for Housing & Schools

In 2009, the American Lung Association released the [National Asthma Public Policy Agenda](#) which highlighted policy interventions that have been proven effective in reducing the burden of asthma nationwide. To help protect the health of children and adults living with asthma, this *Guide to Asthma Policy for Housing & Schools* toolkit was created to support the work of community advocates and policy-makers focused on asthma policy in homes and schools. Policy change is one of the most significant ways to establish long-term, sustainable programs, and many communities have already made great strides in this arena. This toolkit offers the tools, templates, and resources that can help move asthma policy forward.
