

Our School is Now Tobacco-Free

Our school has gone tobacco-free – which means that all indoor and outdoor spaces throughout the campus are smokefree. Studies have shown, tobacco-free spaces are proven ways to encourage our kids to never start smoking.

Did you know:

- Children with parents that smoke are twice as likely to also start smoking, and at a younger age.
- Tobacco use by older siblings, relatives and other important adults in your child's life can also influence their decision-making.

70% of smokers want to quit smoking - do you know someone who wants to quit?

The best combination to quit includes a quit smoking plan & medication. Through a partnership with the American Lung Association and CVS Health®, you can now access:

- 30% off Freedom From Smoking® Plus – the American Lung Association's online quit smoking program
- \$5 off any CVS Health brand nicotine replacement therapy that is 14 count or larger

Join our tobacco-free community, and help our next generation be tobacco-free! Visit [Lung.org/CVS](https://www.lung.org/CVS) for discounts on quit-smoking resources, and other ways to help your community be tobacco-free.

Many kids start smoking at age 11 and some are addicted by age 14. Help us change this statistic!
