February 24, 2014

President Barack Obama
The White House
1600 Pennsylvania Avenue Northwest
Washington DC 20500

Dear Mr. President:

As leading medical and public health organizations, we write you to urge you to direct the U.S. Environmental Protection Agency to adopt the Tier 3 Motor Vehicle Emissions and Fuel Standards no later than February 28, 2014. These stronger public health protections will significantly reduce toxic air pollution from the U.S. passenger vehicle fleet, and are urgently needed. Nearly 150 million Americans still live in areas where the air is too dangerous to breathe. Cleaner gasoline will benefit their health immediately.

Passenger vehicles remain one of the major sources of volatile organic compounds and nitrogen oxide emissions that react in the atmosphere to form ozone, which triggers asthma attacks, worsens lung disease and shortens life. Cars, light trucks and SUVs also contribute to ambient fine particulate matter which threatens heart and lung health, as well as increased risk of premature death. Emerging health research indicates that people who live or work near roadways suffer disproportionate adverse health effects from air pollution.

Not only does the nation need these reductions in ozone and particulate matter to protect public health, lower sulfur gasoline and vehicle emissions standards are one of the most cost-effective paths to cleaner air. The National Association of Clean Air Agencies estimates that by lowering the sulfur content in gasoline, the nation could immediately reduce the amount of air pollution equal to removing 33 million cars and light trucks from our roads. Reducing the sulfur in gasoline will build on the strong foundation of your efforts to increase fuel efficiency and cut carbon pollution in half by 2025.

Americans have the right to breathe clean and healthy air. In our work to improve the health of our patients and the public, we know first-hand that the air too many Americans breathe puts their health

and their lives at risk. The new standards will protect the health of all, especially those who are most vulnerable: our children; the elderly; those with chronic lung disease, heart disease or diabetes; and those who have low incomes. We urge you to direct EPA to adopt the Tier 3 Motor Vehicle Emissions and Fuel Standards by February 28, 2014.

Sincerely,

American Academy of Pediatrics
