

# Should You Be Screened for Lung Cancer?

You may be at high risk for lung cancer if you:

are 55-80 years old  
&  
currently smoke  
or quit in the last 15 years  
&  
have a 30 pack year history

## A 30 PACK YEAR HISTORY IS:

**1 pack** a day  
for **30 years**

**2 packs** a day  
for **15 years**

**3 packs** a day  
for **10 years**

Or any combination of packs smoked per day times the number of years smoked, that is greater than, or equal to 30.

Visit [SavedByTheScan.org](https://www.savedbythescan.org) to take a quiz to see if you are eligible for lung cancer screening.  
If you are at high risk, ask your doctor about lung cancer screening. It could save your life.

If only half of the estimated **9 million** Americans at high risk were screened, about **15,000 lives** would be saved.

**15,000 LIVES**

“Saved By The Scan” is a campaign by the American Lung Association and the Ad Council that aims to raise awareness of the benefits of early detection through lung cancer screening.
