

Air pollution remains a serious threat to public health. For 18 years, the American Lung Association has issued a report card on air quality throughout the United States. Did your city or county make the grade?

More than 125 million Americans, or 4 in 10 of us, live in counties that got at least one “F” for unhealthy air. More than 18 million people live where the air got all “F”s.

Air pollution can lead to illness and premature death.

**Good News:**

Many cities reached their lowest levels of air pollution since the first “State of the Air” report in 2000.

**How?**

Because of the Clean Air Act.

**How did your hometown do?**

Go to [StateoftheAir.org](http://StateoftheAir.org) to find out.

The Clean Air Act has reduced pollution from many sources, but there is more work to do. And climate change will make it harder to continue the progress. We need the Clean Air Act.

**Help us defend the Clean Air Act.**

Too many Americans still breathe unhealthy air. Unfortunately, polluters and their friends in Washington, D.C. want to weaken the Clean Air Act. That’s why we must keep fighting to make sure the U.S. EPA enforces the Clean Air Act to reduce pollution and save lives. You can help. Join the fight for healthy air.

Find out the state of your air, and learn how you can help protect our air at [StateoftheAir.org](http://StateoftheAir.org).
