

PUBLIC POLICY POSITION

POSITION TITLE: Research
DATE APPROVED: February 25, 2017

Policy Principle on Research

The American Lung Association strongly supports research to prevent lung disease, and reduce exacerbation of lung disease, discover cures and improve the diagnosis of lung disease. The research should include basic, translational clinical, biomedical, behavioral and environmental areas. In addition, research should investigate measures to eliminate disparities in lung disease morbidity and mortality for low socioeconomic and minority populations. Research should be conducted in a legal, ethical and humane manner.

Research Funding

The American Lung Association supports increased federal funding levels for biomedical, behavioral, epidemiological, environmental and intervention research and research training programs, including but not limited to those conducted by the National Institutes of Health, the Centers for Disease Control and Prevention, the Agency for Healthcare Research and Quality, the Department of Veterans Affairs and the Environmental Protection Agency.

Animals in Medical Research

The American Lung Association recognizes the critical role animal research has played in making medical advances. The American Lung Association strongly supports full compliance with the existing rules and regulations that assure the humane and compassionate management of laboratory animals. We encourage all forms of biomedical research involving animals that have been carefully scrutinized and deemed worthy by qualified experts, and we oppose all efforts to exclude the use of animals whenever they are essential for research.

Human Stem Cell Research

The American Lung Association recognizes that research with human stem cells offer significant potential to further our understanding of fundamental lung biology and to develop cell-based therapies to treat lung disease. The American Lung Association supports the responsible pursuit of research involving the use of human stem cells.

Responsible Conduct of Research

The American Lung Association requires that the research it supports follow ethical standards including adherence to all applicable federal, state and local rules and regulations. All relevant Institutional Review Boards (IRB)/Human Subjects Committees should review and approve research proposals involving human subjects. Research involving animal subjects must also undergo committee Institutional Animal Care and Use Care (IACUC) review and approval as well as all other review processes as appropriate for the proposed research. Failure to adhere to such processes should result in termination of research support.

While safeguarding patient privacy, the American Lung Association supports full transparency in the conduct of all research, including clinical trials. All clinical trials should be registered and all data should be reported in a timely fashion at clinicaltrials.gov
