FAX: 650-833-7990  
Date of Preparation: 9/8/2008

- The FTND is a physiologically validated scale
- Easy to use in a clinic or office setting  
  - 6 questions  
  - Linear scale  
    - 0-10 points  
      - For Research Purposes, can be split:  
        - Low Nicotine Dependence 0-4 points  
        - High Nicotine Dependence 5-10 points
- Use the FTND to diagnose severity of tobacco dependence as you would measure blood pressure to diagnose severity of hypertension
- Measure immediately before you start treatment for tobacco dependence
- Not useful to re-measure after a patient has stopped smoking
- Useful to re-measure after a patient has relapsed
- In Clinical Medical Practice:  
  - Remember the FTND is linear  
    - The higher the FTND score the more physically dependent is your patient on nicotine  
    - A patient with an FTND score of 10 means that patient is 10% physically more dependent on nicotine than a different patient with an FTND score of 9  
    - A patient with an FTND score of 9 or 10, for example, will need much more aggressive pharmacotherapy for tobacco dependence than a patient with an FTND score of 2 or 3 to suppress nicotine withdrawal symptoms and to keep them suppressed – meaning to have effective pharmacotherapy
  - The treating physician must use higher-than-standard doses of effective medication(s), and/or
  - Combine Controller - and Rescue -type tobacco-dependence medications
  - Treat tobacco dependence, including the pharmacotherapy component, for a much longer duration of time  
    - Years to Decades to Lifetime

NB: This form and scoring instructions may be duplicated without restriction for patient-care or education purposes.
