The Honorable Das Williams, Chair
 Assembly Natural Resources Committee
 1020 N Street, Room 164
 Sacramento, California 95814

Re: SB 32 - Support from Public Health Organizations

Dear Chairman Williams and members of the Natural Resources Committee:

On behalf of the undersigned health and medical organizations, we write to express our support for Senate Bill 32 (SB 32, Pavley), that takes the next important step in air quality and climate protection. This bill addresses the need for mid-term and long-term greenhouse gas reduction goals to continue California’s leadership in cutting harmful pollutants that threaten public health, delay air quality progress and contribute to climate change.

California’s public health community is united in its support for strong action to protect the public and our environment from the worst impacts of climate change. Human health risks associated with climate change include heat-related stress and illnesses, ozone pollution and other pollution-related respiratory and cardiac health impacts, wildfire smoke risks, vector-

borne diseases, flooding and others. We must act now to cut climate pollution today and ensure that the state remains committed to climate protection for the long-term. SB 32 would help California protect its people from the worst impacts of climate change while reducing pollutants that contribute to cancers, lung diseases, cardiovascular disease and premature death.

SB 32 would require the California Air Resources Board to develop a 2050 greenhouse gas reduction goal equivalent to an 80 percent reduction from 1990 levels by 2050 with a focus on all climate pollutants including short-lived pollutants such as black carbon and methane. This bill would also authorize the Air Board to develop interim targets for 2030 and 2040 to ensure that California makes progress and stays on the path to a healthy climate. SB 32 states the Legislature's intent that California adopt climate policies that ensure public health benefits, especially to California's most vulnerable communities, advance job growth, innovation and coordination with jurisdictions outside of our state as we pursue a sustainable future. In developing climate policies to move California forward, we urge attention to those policies that achieve direct emission reductions, especially in vulnerable communities.

We believe that this bill would set California on a healthy course forward to protect our residents from the worst impacts of climate change and to ensure California policies achieve near and long-term clean air benefits. We are pleased to support SB 32 to ensure California continues to show strong leadership in reducing climate pollution and providing health benefits to our most vulnerable residents.

Sincerely,

Bonnie Holmes-Gen, Senior Director, Air Quality and Climate Change
